

HOW IT WORKS AND WHAT WE CAN DO FOR YOU

When you join '*The Better Grass System*' we will:-

- Analyse your soil using the most comprehensive soil fertility audit.
- Interpret the results and make recommendations
- Analyse grass / silage and interpret results
- Make detailed recommendations on what you need to do to:
 - (a) Improve your soil
 - (b) Improve the quality of your grass
- Source the most cost effective products that you need to use.
- Check forage quality mineral and feed values.
- Re-check soils and grass once program has kicked in and monitor results.
- Advise on any cultivation, aeration and sub soiling.

All this helps you grow top quality grass as it should be grown to feed top quality animals as they should be fed.

How much better is it that your stock gets their minerals from every bite of grass they eat?

THE COST

For you to send in 3 soil samples, to show what is going on in the different areas of the farm plus 2 forage/grass/hay or silage samples.

Send you the results for a detailed discussion and interpretation and to build a set of recommendations for you to:-

- i. Improve your soils fertility
- ii. Improve & balance the mineral levels in your grass

Bearing in mind these soil tests are very detailed and that most laboratories (if they could do them, which most can't) would charge £124 or more per sample plus the forage mineral and feed value costs £47 each .

You can see that the cost for this service alone would be over £450, but we only want to cover our costs and so our special price to you is only £347 (plus vat).

N.B. DON'T PAY IF YOU DON'T WANT TO

UNCONDITIONAL GUARANTEE OF SATISFACTION

When we send you the results for discussion with recommendations, if for any reason you are not completely satisfied and happy that the £347 (plus vat) is not excellent value or you simply do not want to use our services then there will be **no charge**.

We can only work with people that **want** to work with us. It is a partnership, we will do our very best to help you improve your soils true fertility to grow Better Grass for your stock to eat, but you have to do your bit too and use the right products at the right time and act as our eyes to tell us what you see happening in the fields and with your stock.

What it means - if you are not totally convinced that the soil/grass results, together with recommendations are not worth the cost – then you do not need to pay. After all, why should you pay for something that you don't want?
