

WT & C M Fischer of North Pembrokeshire Coast -

Farms 400 acres with 150 dairy cows, some beef crosses and tack sheep in winter.

Tom said:

“Definite improvement in palatability. All stock are grazing really well and we’ve not really had to top Many fields even old permanent pastures. Stock turned out in June and less cows are going over to nibble at the hedges.”

Mark said:

*“The dry cows used to go through a mineral bucket within a day or two. Now it can be up to two weeks before they finish one. However, on the fields that we didn’t get the **Better Grass Fertiliser** onto (because they were too steep) the cows still rip through the buckets!*

*“A lot more clovers were visible after the **Basic Slag** application in the spring.*

*“We will be ordering the **Better Grass Fertiliser/Basic Slag** combination for next season.”*

David Smith of Durham

“Basic Slag is fantastic. Really gets the clover going, the grass is much lusher and the stock happier.”

“Mineral use has changed; they used to take lots of the all mineral lick. Now they just take the high Mg mineral lick.”

“Keen to use it all next year, Better Grass, Basic Slag and CAN”.

NOTE: We are going to switch the Smiths on to the high Mg **Better Grass** which will be available this coming year.

Easterby Farms of York

Farms Manager Peter Marsden said

*“We need really high quality haylage for Mr. Easterby’s racing stables. I am very pleased with the **BETTER GRASS** results – the horses out to paddock now eat all areas of grass and are more contented.*

This is their second year on **The Better Grass System** and Peter has already ordered for next year.

NOTE: High quality feed for high quality horses.
