

TECHNICAL INFORMATION

Soil Audit and Nutrient Management

*When you need to foliar feed
There is only one product
That does it all!*

VITA-MAG PLUS

Contains:

Magnesium	5.0% MgO
Manganese	6.0% Mn
Zinc	5.0% Zn
Potassium	1.0% K ₂ O
Boron	0.2% B
Sulphur	15.0% SO ₃

All the above in a biological plant growth stimulant.

Apply at 4 lt/ha in minimum 150 litres of water to all crops where deficiency is confirmed. (*May be compatible with fungicides/insecticides but no advice can be given - discuss with your advisor*).

VITA-MAG PLUS will stimulate plant growth increasing photo synthesis for increased yield and lowering disease pressure.

An application will also stimulate root growth which will in turn increase biological activity causing improved availability in uptake of soil minerals.

NOTE: Plants never need just one mineral. Uptake of a deficient element is improved when applied with another beneficial and compatible mineral.

VITA-MAG PLUS is a unique product produced using latest technology to produce this highly concentrated plant growth stimulant.
