

TECHNICAL INFORMATION

Soil Audit and Nutrient Management

June 2008

***BIO-MULCH* is the right product ...**

**...to use on chopped straw this Autumn,
Especially pre Oilseed Rape and this is why:**

- It speeds up the degradation of chopped straw
- It contains a wide range of BIO-LOGICAL activators and soil conditioners including (*Humic SC*)
- It releases nutrients from straw and from soil
- It encourages FAST germination with deep root systems
- It avoids 'locked up' nitrogen
- It builds soil humus and improves structure
- It leaves the soil smelling sweet that proves good for soil life
- It encourages the phosphate fixing organisms to release phosphates

APPLICATION:

Apply a minimum of 45 litres/hectare (more if BIG quantities of straw) in a minimum of 150 litres of water (the more the better).

PRICING:

The cost is only 87p per litre delivered in 1000 litre IBC's which is enough to do 22 hectares (55 acres) and is a lot better value than using Autumn grade fertilisers like for example 0 - 24 - 24 or TSP. (TSP is now over £650 per tonne)

ORDERING:

Please send cropping programme and indications where straw will be chopped or removed. I will then work out your requirements and send you the detail with any other recommendations.

***Bio-Mulch* supplies:**

Biological activators with phosphate fixers - soil conditioners - humic's
Plus trace minerals including - copper - zinc - manganese as well as:
phosphate, potassium, magnesium, sulphate, boron, and NITROGEN

P.S: Extra boron may be added for Oilseed Rape crops

Bio-Mulch will feed your soil so that your soil can feed your crop
It's the beneficial soil micro-organisms that will supply your crops with the nutrients they require. Modern farming is *BIO-Logical*
